We come to your door – with the Demo-Van

Our engineers come for product demo in one of our three demo vans and they will show you all our products. You can experience Diebold Goldring Tool Holders, the Shrink Fit Technology, the Presetting Devices and the products for worholding. We only need a 400 V connection from your side and we are ready for demonstrations in a few minutes.

To make an appointment, please contact our sales management by phone at: **+ 49-7477-871-712** or by email to: **j.bidlingmaier@hsk.com.**

Often times it happens that an appointment turns into extensive advice and training on tool and workpiece clamping when other employees from your shop floor spontaneously join the meeting. They will then learn a lot about clamping technology in a short time and, above all, they will be sensitized to what is particularly important so that you and your employees can achieve better machining results on your machines.

We also have our taper measuring devices with us and can randomly measure some of your tool holders so that you can read whether your holders are dimensionally correct and also correspond to the current standards. If deviations are found, we offer you our Quality Check. A measuring service in which we measure your tool holders in our factory and provide you with the measurement results in digital form so that you can decide whether your tool holders are sufficiently accurate to continue machining the work pieces with the desired accuracy.

Experience has shown that, on average, 30% of the tool holders available to users are not or no longer within tolerances according to the HSK standard. This is a very serious amount. The customer benefit then justifies the effort to send the tool holders to us for this inspection. This service was developed at the customer‘s request, because there were and still are calls for help from customers because their tool holders and thus also their machining processes cause problems, but the user cannot identify the causes himself.

There are many suppliers in the world of tool holders, both nationally and internationally, but sometimes with questionable product quality. If you are looking for exceptional quality, branded products are the first choice. From Diebold you always get the finest branded products that have been tested several times:

- **Goldring-Tool Holders**
- **JetSleeve®** ShrinkFit Chucks
- **CentroGrip®** High Precision Collet Chucks with runout <0.001 mm
- **UltraGrip®** Power Chucks
- **UltraJet®** Power Chucks with jet-effect
- **Pyroquart®** ShrinkFit Chucks for heavy milling
- **US 1100 Shrink Units**:
  - with TempControl for fully automaitic shrinking
  - with control of the shrink temperature
  - with TubeChiller® for automatic shrinking and cooling
- **DMS Diebold Modular System**:
  Modular ShrinkFit Chucks with damping features
